

DYNOEXELIXIS offers a wide variety of software upgrades and services primarily for high performance European and Japanese automobiles. Our tuning and engineering facility features a state of the art All-Wheel-Drive MAHA LPS3000 dyno cell with proper ventilation and wind tunnel type cooling fans. We have developed our own cooling towers which provide the required airflow to simulate driving condition for a wide variety of different vehicle applications. Our purpose built tuning center features OEM and **DYNOEXELIXIS** proprietary diagnostic tools, testing equipment, computer simulation systems and multitude of other automotive related testing and tuning equipment including the OEM tools from the different automobile manufacturers.

We employ and work with the finest automotive software engineers and automotive technicians that utilize their years of knowledge working for OEM manufacturers as well as with professional racing teams / engineers. The combination of our staff, equipment, facility and our unparalleled experience, clearly sets **DYNOEXELIXIS** apart in the world of aftermarket automotive software development and tuning.
